DETAILED ACTION

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1-9 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for carboxylic acid salts of formula (I) and compositions and articles thereof, the specification does not reasonably provide enablement for an organic nucleating agent defined entirely by the limitations of certain of its functionality. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention, commensurate in scope with these claims, without undue experimentation.

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 12 and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 12 and 13 are directed to metal salts of the compounds of formula (I). The compounds of formula (I) may be metal salts. Therefore, claims 12 and 13 encompass the metal salts of metal salts. This is unclear and therefore, indefinite.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1-13 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-12 of U.S. Patent No. 6,599,711. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims include essentially the same elements.

The nucleating agent of the present invention is that metal salt of the patent. The polyolefin of the present invention is that polyolefin of the patent. The claimed nucleating agent and polyolefin of the present invention are further defined structurally in light of applicant's specification. It is clear that the nucleating agents and polyolefins that possess the properties as set forth in the claims are structurally identical to the nucleating agents and polyolefins set forth

Art Unit: 1714

in the 6,599,711 patent. Since a component may not be separated from its inherent properties.

The resulting compositions of the present application and the patent are therefore the same compositions. The claims are not patentably distinct.
